Farmers and interested community are invited to a special field trip near Junee with a focus on the extraordinary role bugs and beneficial insects play in the farming landscape. Three highly regarded presenters will share their knowledge gained from extensive research on bugs and biodiversity and the many benefits they bring to agricultural production. We will also look at the optimum design of shelter belts & techniques for the restoration of riparian areas with some practical takeaways on species types for participants to apply to their own farms.

RSVP: Register on Eventbrite or contact Landcare : 0429 458717 | midmurrumbidgeenorth@mli.org.au
