

Soil Organic Carbon on "Mundarlo" South West Slopes Riverina

Where:

Tumblong Tavern
87 Tumblong Road (off Hume
Highway)

When:

Wednesday 3 February
9.30am - 11.30am

Morning tea provided

For further info & RSVP contact:

Lisa Castleman
Agronomist
Senior Land Services Officer
0427 201 963
lisa.castleman@lls.nsw.gov.au

For interested land managers, farmers and stock owners

All welcome

Do you have an interest in soil organic carbon?

In 2015 Riverina Local Land Services chose six farms to establish a baseline measurement for soil organic carbon. The farms range from the SW Highlands across the Riverina to the Rangelands and represent different farming systems.

The soil carbon story has been sampled, tested and mapped using a methodology developed by **Dr Ischani Wheeler**. Soil organic carbon can be accounted for when changes over time are measurable. This methodology brings science and technology together and your farm one step closer to carbon farming.

Presentation:

Peter & Hazel McInerney, 3D-Ag Pty Ltd share the story of mapping soil organic carbon for **Nick Austin's** property "**Mundarlo**", which represents a farming system within the South West Slopes. Look at real values measured across the whole property. How does this compare to other localities in the greater Riverina region?

Ashley Paech, Farming Systems Project Officer, Holbrook Landcare Network. How carbon trading works and the Emissions Reduction Fund.
