

*Harden-Murrumburrah Landcare Group together with
Riverina Local Land Services
invite you to an information session*

Trouble with Sub* **Soil nodulation & nitrogen, pastures and animal health update**

Tuesday 14 June 2016
Wallendbeen Hotel
1.30pm – 3.30pm
Free afternoon tea provided

Presenters

Janelle Jenkins, Mixed Farming Officer, Riverina Local Land Services
- local results from the Trouble with Sub project.

Dr Sofie De Meyer and Tim Hasket, Rhizobiologist, Murdoch University WA
- rhizobia and soils and the results of a similar project from all the southern Australian states.

Dr Rahul Shankar, District Veterinarian, Riverina Local Land Services
- current animal health issues

*The Trouble with Sub Project brief update

- The survey found that subterranean clovers are poorly nodulated in the pastures of the medium to high rainfall zones of the Riverina region.
- Many of the soils sampled were affected by acidity particularly in the sub soil.
- Few landholders appear to be applying the important (for nitrogen fixation by legume) micro nutrient molybdenum.
- The rhizobia present in the soil are by large of an effective strain and are also generally fixing atmospheric nitrogen.

**For catering purposes RSVP to Louise Hufton 0428 863 954 or
louise.hufton@lls.nsw.gov.au**

Remember to rug up to stay warm in cold weather
