

Rehydrating the Floodplains

Turallo Creek Open Day

Saturday 7th November 2015

Visit Turallo Creek where it runs through The Gib property and see a holistic farm approach to reducing creek erosion by creating a series of bed control structures. This in turn is rehydrating the floodplain and slowing the water flow.

The Turallo Creek riparian work has been done with inexpensive and non engineered structures and has been constructed using only on farm equipment.

The Gib also shows examples of extensive erosion reduction of the gullies entering the creek by use of fencing and planting to restore the damaged environment.

Where: The Gib
79 Hoskinstown Road
Bungendore NSW
Time: 10am – 3pm

On entry follow signage to the parking area
Walking shoes are required and good mobility essential
Be cautious of creek banks as they may be unstable
